ESTABLISHED UPWARDS OF HALF A CENTURY.

GEO. COOLING & SONS,

Seed Merchants and Nurserymen,

Seed Warehouse—11 NORTHGATE STREET, BATH.

Nurseries and Rose Grounds—BATHEASTON and SWAINSWICK, near BATH.

January 1st, 1910.

GEO. COOLING & SONS send all VEGETABLE and FLOWER SEEDS Free by Post or Rail. SEED POTATOES, CULINARY ROOTS, MANURES, and GARDEN REQUISITES are sent Carriage Free when the Order, including Seeds, amounts to 20/ and upwards.

Customers will much oblige by giving instructions as to best means of forwarding, name of nearest Station, &c., to ensure prompt delivery.

To obviate the necessity of writing the Seed Order in detail, an Order Sheet is enclosed with this Catalogue, the quantity required of each variety having only to be marked in the column left for that purpose. Care should be taken to always fill in the Name and Address; during the season many orders reach us unsigned, and much inconvenience to customers is caused by our being unable to trace the origin of such orders.

Cheques should be crossed "UNION OF LONDON AND SMITHS' BANK, LTD.," and Postal Notes and Orders made payable to GEO. COOLING & SONS, Bath. May we ask as a favour that orders for very trifling amounts be accompanied by the remittance, the trouble and expense of booking these small sums being great.

We allow a Discount of 5 per cent. off amounts above £1 paid within 14 days' date of Invoice. All Accounts are due without deduction at Midsummer and Christmas. A remittance or reference is respectfully requested from those sending their orders for the first time.

RETURNED EMPTIES.—We charge cost price for Hampers, Bags, &c., but are always willing to allow the full amount charged if they are returned to us in good condition within a month. The name of the sender should always be written upon the address label, and we should be advised by post of their dispatch.

Address for Telegrams—"COOLING, BATH." National Telephone—No. 10.

Our NURSERY CATALOGUE, containing Descriptive List of Roses, Fruit Trees, Evergreens, Shrubs, Hardy Climbers, &c., will be forwarded Post Free on application.

VEGETABLE SEEDS

GARDEN PEAS.

CULTIVATION.—Peas do well in any good garden soil, but thrive best in ground deeply trenched and manured or a previous crop. Sow about an inch and a-half deep in double rows 6 or 8 inches apart. It is also a good plan to sow in trenches wide apart, with some other crop between; by this means both sides of the rows get the full advantage of light and air, while the trenches are convenient for watering in dry seasons. They should be kept clean from weeds and earthed up twice in their growth. The height to which peas will grow in a great measure depends on the richness of the soil and the wetness of the season. The large wrinkled varieties are the sweetest and most delicately flavoured, but are not so hardy as the dwarf sorts, and therefore not so well adapted for small gardens. Those growing 3 feet high should not be nearer each other than 3 or 4 feet, and have stakes or bush for support. For an early crop a sowing of the *Earliest* varieties may be made in November, December, and January—they are hardy, and frost will not harm them. Sowings of *Second Early* varieties may be made in February, and the main crops in succession from March to the end of May. Late sowings for Autumn crops may be made, according to the season, until the early part of July. Peas should be gathered as fast as they become fit for use.

Earliest Varieties.

COOLING'S FIRST EARLY, a careful selection from *Earliest of All*; it is ready quite 3 or 4 days before that variety, and produces longer and better filled pods; we offer it with every confidence as the best and most prolific first early round variety with which we are acquainted ... 2 0

COOLING'S EARLY MARKET, an early wrinkled Pea, which quickly follows the preceding variety. It grows about 18 inches high, and is far superior to all varieties of the *American Wonder* type. It is hardy and very productive; highly recommended ... 2 0

THE LAXTONIAN. The raisers say this is the finest early Pea yet introduced; it is ready for gathering several days before *Gradus*, it

NOVELTY

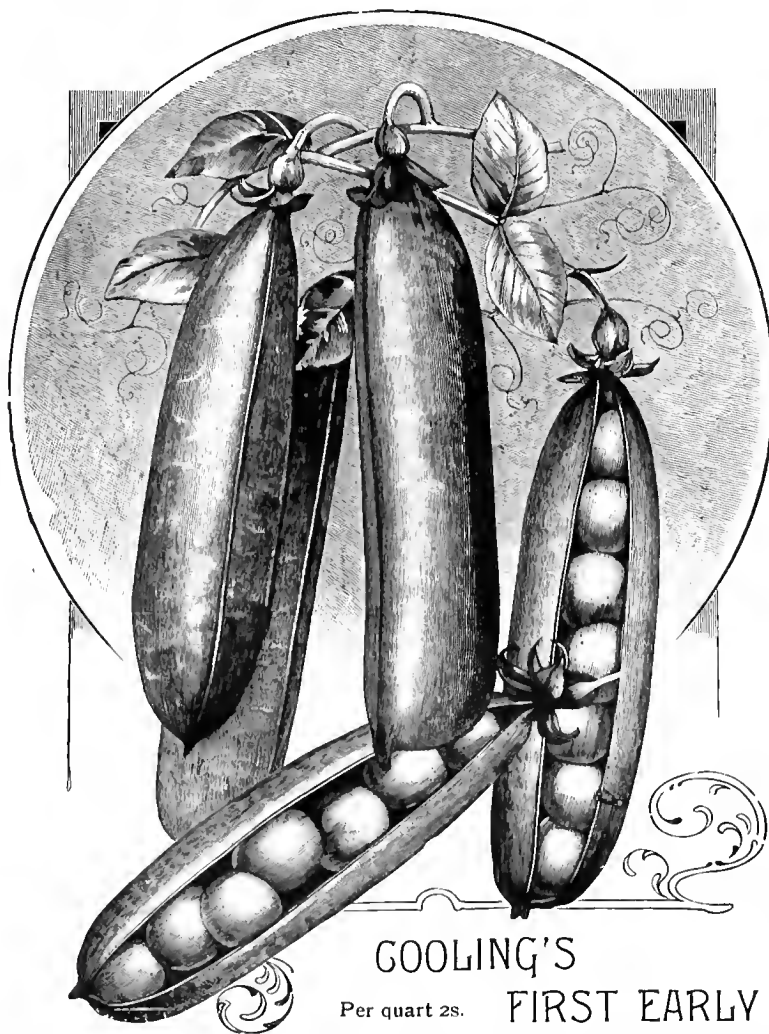

has a true marrowfat flavour, pods very large and, if anything, larger than that well-known variety ... 18 in., per ½-pint pkt. 1/6

CHELSEA GEM, an early wrinkled variety of superior quality, as early as *American Wonder*, but a much larger cropper... 1 ft. 2 0

GRADUS, a large podded first early wrinkled marrow of great merit; produces deep green coloured pods which are as large and well filled as *Duke of Albany* ... 3 ft. 2 0

IDEAL (*Sutton*), a good first early marrowfat, very superior flavour, one of the best of the taller first crop varieties ... 3 ft. 2 6

SUTTON'S SEEDLING MARROWFAT, a very excellent dwarf Pea, ready to gather at same time as *American Wonder* or *William the First*, very large pods .. 1 ft. 2 6

SCARLET, well-known and productive variety, good for general crop ... 1 0

VEITCH'S CLIMBING FRENCH BEAN, this variety combines the qualities of the Dwarf and Runner Bean. It is much earlier than the Runner, has all the delicate flavour and quality of the Dwarf Bean ... 2 0

WHITE SEEDED RUNNER, a favourite variety with market growers, as the pods keep a bright green instead of turning brown as they grow old ... 1 0

COOLING'S IMPROVED WHITE WINDSOR.

Cooling's Improved White Windsor is the best type of Broad Bean in cultivation.

FRENCH or KIDNEY BEANS.

COOLING'S NE PLUS ULTRA.

CULTIVATION.—The Dwarf varieties may be sown from the middle of April to the end of July in rows 2 feet apart; if dry weather sets in water copiously. The most suitable time for sowing the tall varieties is during the month of May, in rows 4 feet wide, and the seed 2 inches deep.

Dwarf Varieties.

	Per quart—s. d.
COOLING'S "NE PLUS ULTRA." Selected stock. This variety has now established itself as the earliest and most productive Dwarf Bean in cultivation; it is unequalled for forcing or first sowing out of doors, being at least ten days earlier than <i>Osborn's</i> and other well-known early kinds. This fine Dwarf Bean has been awarded more Certificates of Merit by the Royal Horticultural Society after the Chiswick trials than any other variety ...	2 0
EVERBEARING , dwarf, robust and bushy, should be allowed plenty of room for growth; the pods are dark green in colour and delicious in flavour; marvelously productive and extremely early ...	2 0

ASPARAGUS.

CULTIVATION.—The seed should be sown in March and April, in rows two feet apart; when one or two years old transplant into beds. In selecting a spot for an Asparagus Bed choose an open and sunny situation; as this is a crop which will occupy the same spot for several years a little trouble expended upon it in the first place will well repay itself. The soil should be trenched at least to the depth of two feet, and plenty of good rotten manure mixed with it from top to bottom. The beds may be four feet wide, with two feet alleys between; three rows should be planted in each bed, one in the centre and one on each side at the distance of a foot; the roots about nine inches apart in the rows. A dressing of salt or asparagus manure in autumn or early spring at the rate of about four pounds to every six square yards is very beneficial.

	Per oz.—s. d.
CONNOVER'S COLOSSAL , an American variety, grows to an immense size, and is fit to cut two years after sowing ...	0 6
GIANT , the ordinary kind ...	0 4
GIANT ARGENTEUIL , early purple, as grown by the celebrated French growers for Paris market ...	0 6

For ASPARAGUS PLANTS, see *Culinary Roots*, page 23.

Cooling's "Ne Plus Ultra" Dwarf Beans should be included in every seed order.

COOLING'S OMEGA.

BEET.

CULTIVATION.—Sow end of April and in May in drills a foot apart and half-an-inch deep; thin out the plants when up to 12 inches apart. A rich deep open soil is the most suitable for Beet.

Per oz.—s. d.

COOLING'S OMEGA, this highly esteemed variety is of medium size, and remarkable for handsome shape and rich crimson colour, but more especially so for its distinct flavour, which is delicately sweet and agreeable, far surpassing any kind yet offered. COOLING'S PERFECTION.

BRUSSELS SPROUTS.

CULTIVATION.—This much esteemed vegetable requires a long season to complete its growth. Sow in February or early in March for first, and April for successive crops; have the seedlings planted out before Midsummer. In October the plants should have additional earth drawn to the roots to support them and prevent their being injured by frost. We are particularly noted for our Brussels Sprout Seed; it always gives the greatest satisfaction.

Cooling's Ne Plus Ultra.—The best Autumn Cauliflower.

CABBAGE.

CULTIVATION.—To grow good full-headed Cabbage the ground must be richly manured, deeply dug, and thoroughly worked. Sow in rich finely-raked soil which has had a good soaking of water the day before. As soon as the seedlings are well up thin out or prick them off in another bed 6 inches apart. When planted out they should stand about 30 inches asunder. Hoe every week, stirring the ground deeper, and drawing the earth up to the plants when they begin to head. A supply of Cabbage may be had all the year round by successive sowings. The first sowing should be made about the middle of March—this will give the late autumn and winter supply. Further sowings may be made at intervals on to end of July or beginning of August, which will come in for spring and summer use. The Red Pickling should be sown in August.

Cooling's Champion Carrot is perfection in shape, size, and colour, best for exhibition and main crop.

COOLING'S WHITE DEFIANCE.

CELERY.

CULTIVATION.—Succeeds best in a highly enriched soil having abundance of moisture. For earliest crop sow on a hot bed in February, and for main crops in March and April. Prick out the earliest sowings when about two inches high, and transfer to the trenches in June. The latter sowings should be pricked into rich soil, and allowed to stand until they are four or five inches high. The trenches should be twelve to eighteen inches deep, at the bottom of which a heavy dressing of manure should be dug in. Earth up gradually as the plants grow, and water every week should the weather be dry.

CORN SALAD or LAMB'S LETTUCE.

CULTIVATION.—Sow in April for Autumn use and in August for Spring use. This is the most economical of all small salads, and may be used as a substitute for Lettuce in winter.—Per packet 3d. and 6d.

DANDELION.

CULTIVATION.—Sow in March and April where the plants are to stand, in rows 12 to 15 inches apart. The quality is much improved by blanching, which may be done by placing inverted flower pots over the plants.

IMPROVED THICK-LEAVED or CABBAGING, excellent for salads, per pkt. 6d.

EGG PLANT.

CULTIVATION.—Sow in hot-bed in March, and when 3 ins. high put the plants singly into small flower pots and place in a frame till all cold weather is past, when they may be taken from the pots without disturbing the roots and planted in a sheltered place 2 feet apart. Draw the earth up to their stems when about a foot high.

PURPLE, SCARLET, WHITE, and MIXED.
Each per pkt. 3d. & 6d.

Cooling's Superb Red Celery is the most solid and best flavoured Celery grown; its peculiar nutty flavour is appreciated by all.

CUCUMBERS.

CULTIVATION.—Sow the Frame Varieties from January until March for succession; care should be taken to keep up a uniform heat, both bottom and atmospheric, which should range from 70 to 80 degrees. When the plants are in bearing an occasional watering of liquid manure will assist in swelling out and forwarding the fruit; care must also be taken that the plants are stopped and trained regularly, and not be allowed to make too much wood.

Sow the Ridge Varieties in April, and plant towards the end of May in good rich ground.

ONION.

CULTIVATION.—To grow onions successfully the ground cannot be too rich; if possible, heavily manure and trench deeply a piece of land specially in the autumn, and leave in ridges during the winter to soften. If large Onions are required early sowing is necessary; the first or second week in February is not too early, but for ordinary crops March is the best month. Sow thinly in drills about a quarter of an inch deep and nine inches apart, keep clear of all weeds by hoeing, and if growing for exhibition thin well and give an occasional watering of liquid manure. To produce small pickling Onions the seed should be sown very thickly and on poor soil. Sow the *Giant Rocca*, *Tripoli*, and other winter varieties during July and August.

For Spring Sowing.

COOLING'S IMPROVED WHITE SPANISH.

This has been grown in our own seed grounds from selected bulbs for several years, and is far superior to that generally sold as *White Spanish*, being larger in size, more solid, and handsome in shape; we have grown it side by side with *Reading*, *Nuneham Park*, and others, and found it far superior, and consider it the most useful Onion in cultivation for general crop

PARSLEY.

CULTIVATION.—Sow any time between February and August, in a somewhat shady situation in drills one foot apart, and cover with fine mould to the depth of half an inch. It usually takes several weeks to germinate. In dry weather the seed should be frequently watered.

Per oz.—s. d.

COOLING'S FAVOURITE, a very fine variety, exquisitely curled, and of a rich deep green colour, very ornamental, and stands a long time without running to seed. We claim that this is the finest type of double garnishing Parsley in cultivation, and highly recommend it 1 0

BEAUTY OF THE PARTERRE. This variety is highly decorative; its dark green foliage consists of innumerable quilled leaflets, which gives it a singularly charming appearance as an edging 1 0

PARSNIP.

CULTIVATION.—The Parsnip luxuriates in deep rich soil, which should be subsoiled, and the manure applied should be thoroughly decomposed; ground prepared in this manner will always produce long smooth roots. Sow in February in drills drawn eighteen inches apart, and cover with about half-an-inch of fine soil. When the young plants are about 2 to 3 inches high thin out to four inches. They are perfectly hardy, and should be dug up only as required.

CULTIVATION.—Sow in drills about six inches apart on rich soil during April and May; thin out to four inches apart.

Per packet 3d. and 6d.

SALSAFY and SCORZONERA.

CULTIVATION.—Sow in April and May in drills fifteen inches apart; take up the roots in November. The Salsafy has a grassy top and a long white tapering root nearly resembling a small Parsnip. When properly cooked it is very wholesome and nutritious, with the flavour of an oyster. Scorzonera is very similar to Salsafy, and is also known as Black Salsafy or Black Oyster Plant.

SEAKALE (Seed).

CULTIVATION.—The soil for Seakale must be well trenched and manured. If grown from seed, sow in March and April in drills three feet apart and an inch deep. If roots are planted (which is much preferable) single plants should be placed nine inches apart, in rows three feet from each other. Seakale is easily forced in a warm cellar by putting some of the strongest roots in boxes or pots of soil and covering with litter.

LILY WHITE, considered to be far superior to the old variety, and more delicate in colour ... per oz. 1s.

ORDINARY VARIETY 9d.

For Roots, see page 23.

SPINACH.

CULTIVATION.—For an early summer crop sow *Round-Seeded* early in February in drills one foot apart, and thin out to two inches in the row. The *Prickly* kind is generally sown in August for winter and early spring use. The *Orach* varieties may be sown at any time in the spring, and will prove valuable in the event of a drought or hot weather.

TURNIP.

CULTIVATION.—A light rich sandy loam which has been well manured is the most favourable soil for growing sweet, crisp, and juicy Turnips. For early use sow the *Early* varieties towards the end of March, in drills 12 to 15 inches apart, to be thinned out to 6 or 9 inches in the rows. Sow again in April, and for a succession of summer and autumn crops make occasional small sowings up to the end of July. Sow *Orange Jelly* and *American Stone* not later than the first week in September for winter crop.

FROGMORE SELECTED TOMATO.

TOMATO.

CULTIVATION.—The Tomato is rapidly growing in general estimation, and will probably soon be considered one of the most important of all garden vegetables, as it can be prepared in so many ways for family use throughout the whole year. Sow as required from January to March, and when the plants are about 2 inches high transplant into small pots—one plant to each pot—and set the pots into the hot-bed, by which process the plants are rendered more sturdy and branching. Transfer to the open ground as soon as all danger of frost is over, in hills four feet apart each way, having previously mixed a shovelful of well-rotted manure with the soil. Water freely at time of transplanting, and shelter from the sun for a few days until the plants are established. To hasten the maturity of the first fruits which sets, pinch off the tops and all the secondary shoots which afterwards appear above the flowers. Soil should be rich and light on a dry sub-soil.

**SELECTED MUSHROOM SPAWN.**

Our Improved Spawn produces large crops of thick fleshy Mushrooms.

CULTIVATION.—In making a Mushroom bed so much fresh horse-manure as will be required to make the bed 12 to 18 inches deep should be thrown into a heap to ferment; turn and mix it well together every three or four days. After it has been turned several times, say for a fortnight or three weeks, it will be fit to make the bed. Beat the manure well down to the depth mentioned above, and allow it to remain a day or two until sufficiently cooled for spawning. When the temperature of the bed is about 65° break the spawn into pieces about the thickness of a walnut, and place it into the bed 2 inches deep and 9 inches apart; cover with 2 inches of good soil, and again beat down. The Mushrooms should appear in about 5 or 6 weeks after spawning. Should the bed get very dry (but on no account otherwise) a slight watering with tepid water is beneficial; when the Mushrooms begin to appear tepid water may be given more frequently. Much disappointment often occurs in growing Mushrooms. To prevent this as much as possible, we have made arrangements for a supply of spawn from one of the best makers in the country; we can especially recommend it as being of the finest quality procurable, and feel convinced that when once tried no other make will afterwards be used.

FRENCH MUSHROOM SPAWN.—This imported Spawn is gaining favour on account of the excellence of the Mushrooms it produces and its invariable good quality. Many amateurs who fail with the ordinary Spawn succeed with this.—Per box 3/.

From H. S. Brown, Esq., Southsea.—“I am glad to tell you the results I have had from your Seeds are more than satisfactory.”

HERBS.

CULTIVATION.—A few Pot Herbs should have a place in every vegetable garden. Every cook and every good housekeeper knows the value of the little patch on which she makes daily raids in the summer, and which furnishes such a nice collection of dried herbs for winter seasoning. A very small space will grow all the herbs needed in any family. Their culture is very simple, and the best way is to make a little seed-bed in the early spring, and set the plants out as soon as large enough in a bed. Care must be taken to harvest them properly: this should be done on a dry day, just as they come into full blossom. Tie them up in small bunches and hang in the shade to dry, and then wrap up in paper and stow in some air-tight vessel, or rub the leaves to a powder and pack in bottles and cork tightly; they will keep for any length of time.

SEED POTATOES.

Our Potatoes are grown specially for seed ; all the most important varieties in the best districts of Scotland and Lincolnshire ; they are very carefully selected, and may be relied upon as true to name and perfectly free from disease. Although we cannot compete with the prices asked for the ordinary market samples, which are sold for eating purposes, and which are too often bought and sent out in a mixed state for planting, yet we believe our

prices will compare very favourably with those of other seedsmen who make Potatoes a speciality.

COOLING & SONS' LAWN GRASS SEEDS

As supplied to the Royal Parks.

GRASS SEEDS can never be sown too thickly, as it is found that the thicker the seed is sown the finer will be the turf. March and April are the best months for sowing, and the quantity of seed usually sown is 80 lbs. to 100 lbs. per acre. If the ground is to be clothed thickly the larger quantity is recommended. The land should be rolled before and after sowing the seed. As many kinds of small birds are very fond of Grass Seeds, it may be well to give some protection for a short time till the plants are up. Carefully remove all weeds as soon as they make their appearance, and when the grass has grown a few inches high it should be mown with a scythe, and cut afterwards every ten days till October. A mowing machine should not be used the first season. **Frequent Mowing** and **Rolling** are necessary to keep the turf in good order, as a thick bottom grass cannot be procured and maintained without compression by frequent rolling.

To improve Old Lawns that are thin, about 20 lbs. per acre of Lawn Seed may be sown, raked in with a fine tooth-rake, and well rolled.

COOLING'S "PHŒNIX" LAWN GRASS

OUR ROOT SEEDS

Have been saved from carefully selected and transplanted Bulbs. By this process less seed is harvested and a greater expense incurred, but the seed is infinitely more valuable to the purchaser, and may be relied upon for producing a greater weight per acre of well-formed roots.

MANGEL WURZEL.

COOLING'S CONQUEROR, a specially selected stock of Yellow Globe Mangel which we consider the best type of this class yet offered. It is handsome in shape, very firm in flesh, and produces an immense weight per acre.

per lb. 1/6

Golden Tankard, a yellow fleshed variety of unequalled feeding and milk producing properties, of medium size and beautiful shape. We can strongly recommend our selected stock of this popular variety.

Selected ... per lb. 1/6.

Other varieties from 1/ per lb.

SWEDES.

COOLING'S TRIUMPH, this Swede has been carefully selected and grown for many years. It combines the special properties of being the heaviest cropping, hardiest, and most nutritious variety. It grows to a good size without coarseness, keeps sound until very late in spring, and will succeed on all soils, often when other varieties fail; strongly recommended, bush. 45/; lb. 1/-

COOLING'S SELECTED GREEN-TOP, at a trial of some twenty distinct varieties of Swedes made at Mr Geo. Gent's farm at Tormarton last year this variety, with our *Triumph*, stood out in front of all others as the best and heaviest cropping kinds. It is most handsome in shape, uniform in growth, firm in flesh, and short in top. It is of the bronzy green type, and therefore very hardy ... per bush. 45/; per lb. 1/-

Other varieties from 25/ per bushel; 6d. per lb.

Begonia Roots for Bedding and Pot Culture.

The popularity and adaptability of the Begonia for Bedding purposes has led to its largely increased cultivation. During the summer beds of Begonias withstand the heavy showers and weather far better than Geraniums or Verbenas, and last far longer in flower. We are offering a very beautiful collection of both single and double kinds, in separate shades of colour, at prices really less than the cost of ordinary bedding plants. We strongly recommend their more extended use for out-door culture.

Tropæolum (Climbing Nasturtiums).

Most showy and attractive free-blooming climbers, should not be sown in very rich soil as it produces too vigorous a growth of foliage which hides the flowers, whereas in a poor soil the flowers will be thrown well above the foliage. The *Lobbianum* varieties have very dark foliage, which adds considerably to their beauty. Half-hardy annual.

STOCKS—continued.**WINTER-FLOWERING STOCKS.**

This beautiful departure in Stocks are most useful for cutting, not only for their delicious scent, but the long spikes of flowers they produce in such abundance; equally suited for winter-flowering in the conservatory or for the open ground for the Autumn. Sow in Spring for flowering in July, and in early Summer for Autumn-flowering.

713 **Apple Blossom**, white shaded
carmine, very beautiful,  **NOVELTY**
per packet 6d. and 1s.

714 **Beauty of Nice**, delicate shade of fleshy pink;
the plant throws up a gigantic
main flower spike about a foot  **NOVELTY**
in length per packet 6d. and 1s.

715 **Queen Alexandra**, a very beautiful variety,
colour rosy lilac of a very
charming tint, pkt. 6d. and 1s.  **NOVELTY**

716 **Crimson King**, fiery crimson, a very effective
shade; a variety similar in  **NOVELTY**
form to the *Beauty of Nice*,
per packet 6d. and 1s.

The above are four very beautiful new varieties,
and are quite a new departure in Stocks.

NEW PERPETUAL.

717 **Princess Alice**, a continuous flowering pure
white variety, grows in the open ground 2 feet
high. Frequent sowings may be made, and if
sown early will produce an abundance of beau-
tifully-shaped flowers of the purest white from
May until November, and often until December,
per packet 6d. and 1s.

IMPROVED QUEEN.

A fine variety of dwarf habit, very double and
much branched, very hardy, and suitable for exposed
situations.

718 **Blood Red**, compact habit and vigorous growth,
6 inches high, flowers of blood  **NOVELTY**
red colour, standing out effec-
tively from the broad green leaves, pkt. 6d. & 1s.

719 **Mixed Colours** per packet 6d.

SMILAX.

720 **Medeola Asparagoides**, half-hardy perennial
climber growing very freely from seed, with
long graceful leafy stems, much used for table
decoration. The cut branches remain fresh for
a long period per packet 1s.

721 — **Myrtifolia**, the sprays are produced
with greater freedom than the
above, and being of harder  **NOVELTY**
foliage is more lasting in the cut state,
per packet 1s. 6d.

the flowers are of a delicate pale pink colour;
effective for spring bedding and edgings,
per packet 6d.

**SINNINGIA.**

725 **Regina Hybrida**. The Sinningia is the genus
from which the Gloxinia has been developed,
and in these new hybrids the flowers are con-
siderably larger than the species and not quite
so drooping. They vary in colour from light
rose to pale and deep lilac—the throat being
generally pure white. The plant is strikingly
handsome, about 9 inches high, per packet 1s.

SOLANUM.

726 **Wetherill's Hybrids**, ornamental berried plants
for table decoration per packet 6d.
727 **Capsicastrum**, valuable for decorative pur-
poses, per packet 6d.

We carefully prove the growth of every parcel of seed we send out: disappointment from defective
germination is therefore almost impossible.

New and Beautiful Varieties of Sweet Peas.

Great attention has been directed to Sweet Peas of late years, and perhaps in no other hardy flowers has there been recently such marked improvement as in this popular class of Annuals. By careful trials of our own, and watching other large trials, we have been enabled to revise our list and to include only the very large flowered and most distinct varieties, and we believe we offer a most representative collection. We have again added several desirable new varieties for this season, and the best of the Novelties exhibited at the Royal Horticultural Society's and other Shows.

*Those marked * are the best of their colour, recommended by the National Sweet Pea Society.*

CHOICE HYBRID GLADIOLUS.

For a rich and grand effect during the summer and autumn months, the many and beautiful colours of this splendid tribe of flowering bulbs form one of the most attractive features of the flower garden. They prefer a warm south border, but will grow in almost any situation in ordinary garden soil, which must be deeply dug and slightly enriched with well-decayed manure. The bulbs should be planted from 3 to 4 inches deep, and covered with sand to the depth of an inch, over which place the soil. By planting from February until April a succession of bloom will be produced from July till October.

GLADIOLUS NANCEIANUS HYBRIDS.

A new superb race of Amaryllis-flowered Gladioli, resembling and surpassing the beautiful *Gladiolus Childsi* in variety of colours. This race excels by a most varied range of colours and by its large well opened flowers, and are very strong growing.

Beautiful Mixture, per doz 2 : per 100. 15.

GLADIOLUS CHILDSI.

Beautiful varieties of Hybrid Gladiolus, worthy of extended cultivation. They outrank all other varieties in size of spike, size of bloom, and vigour and freedom of flowering, and are altogether a distinct advance.

Large Flowering Bulbs, finest mixed varieties, doz. 1/6 : 100, 10/6.

LEMOINE'S SPOTTED HYBRID GLADIOLUS.

The colours are very striking and diversified, and differ from the ordinary Gladiolus by having a distinct blotch on the lower petals of maroon, purple, or crimson.

LILIUMS.

POT CULTURE.—As soon as the bulbs are received pot them, one in a 6-inch pot, or two or three in an 8-inch pot. Do not let the soil come within two inches of the rim of the pot. Place in a cold frame, and give water sparingly till growth appears. As the shoots increase give more liberal supplies, and when all danger of frost is past remove to a sheltered but light situation in the open air. About the beginning of July fill up the pots to within an inch of the rim with well-rotted manure. As soon as the buds are fairly developed afford the plants the protection of a glass roof or other shelter.

*The varieties marked * are the most suitable for pot culture.*

DOUBLE TUBEROSES.

These produce long spikes of double pure white flowers, exceedingly fragrant and invaluable for bouquets. The value of the *Excelsior Pearl* over other varieties consists in its flowers being of double the size, imbricated like a rose, and its dwarf habit, growing only from 18 to 24 inches in height. The bulbs should be potted firmly in rich loamy soil, and plunged in bottom heat, care being taken that the temperature does not fall below 60 degrees.

Excelsior Pearl per doz. 2/; per 100, 12/6.

PÆONIES.

Few plants are so deserving of general favour as the various types of *Pæonies*, and they succeed in almost any situation. The flowers are of marvellous beauty and great substance, and represent the finest self colours as white, pink, blood-red, crimson, and purple, whilst others are spotted and shaded. They are excellent for planting on the front side of shrubberies, and when several are planted together the effect is superb. They bloom in May and June.
